WHITE TUSKER
PRIVATE LIMITED

FEATURE SET

PoS and F&B Management System

Billing, inventory, purchasing, recipe costing and live analytics for restaurants and bars, built so every bill makes the next decision smarter.

PREPARED BY
White Tusker Private Limited, Bengaluru

DATE
October 2026

AT A GLANCE

Four apps, one system, one source of truth

Every person signs in once and gets the app built for their job. Behind them, one stock ledger connects billing to purchasing, costing and the menu.

01

Billing POS

For cashiers on a counter tablet or desktop. Touch, mouse or keyboard. Keeps billing when the internet is down.

02

Admin and dashboard

For owners, managers, chefs, storekeepers and accounts: catalogue, stock, purchasing, pricing and reports.

03

Receiving app

For the watchman and storekeeper on a phone: gate check, re-check with photos, goods received note.

04

Guest QR menu

For guests on their own phone. Menu by course, offers on drinks, and table ordering, with no sign-in.

Food: the best margin sells first

Inside each course, dishes are listed by margin, highest first, so guests see the dishes that earn you most at the top.

Drinks: offers driven by stock

When a drink runs low, similar drinks priced just above it go on offer automatically, steering demand to what you have.

HOW A DAY RUNS

One loop, from tonight's order to tomorrow's menu

NIGHT, AT CUT-OFF

Indent raised

Shortfall against par, one PDF order per vendor

→

5:00 AM

Gate check

Watchman accepts, shorts or returns each line

→

MORNING

Goods received

Staff re-check; GRN puts stock in and goes to accounts

BEFORE OPENING

Re-cost and re-rank

New rates re-cost recipes; each course re-ranks

→

SERVICE

Bill and deduct

Each bill deducts stock; low drinks trigger offers

→

ALL DAY

Dashboard updates

Tonight's stock sets the next indent

Each step runs on its own schedule and catches up automatically after downtime, so nothing is missed if a server restarts.

BILLING POS

Fast at the counter, careful with every rupee

- **Table or takeaway**; a bill opens at the first order and later orders join it
- **Food by course in margin order**, drinks by type and brand
- **Sold out greyed**, and "4 left" on items running low
- **Food and liquor totalled separately**, each with its own taxes
- **Cash, UPI, card or split**, with quick-cash buttons and change worked out
- **80 mm receipt** with GSTIN, FSSAI number and veg / non-veg marks, printed or shared
- **Keyboard shortcuts**: F2 new bill, / search, F9 send order, F8 pay, F4 open bills
- **Manager approval** for cancellations, voids, refunds and manual discounts

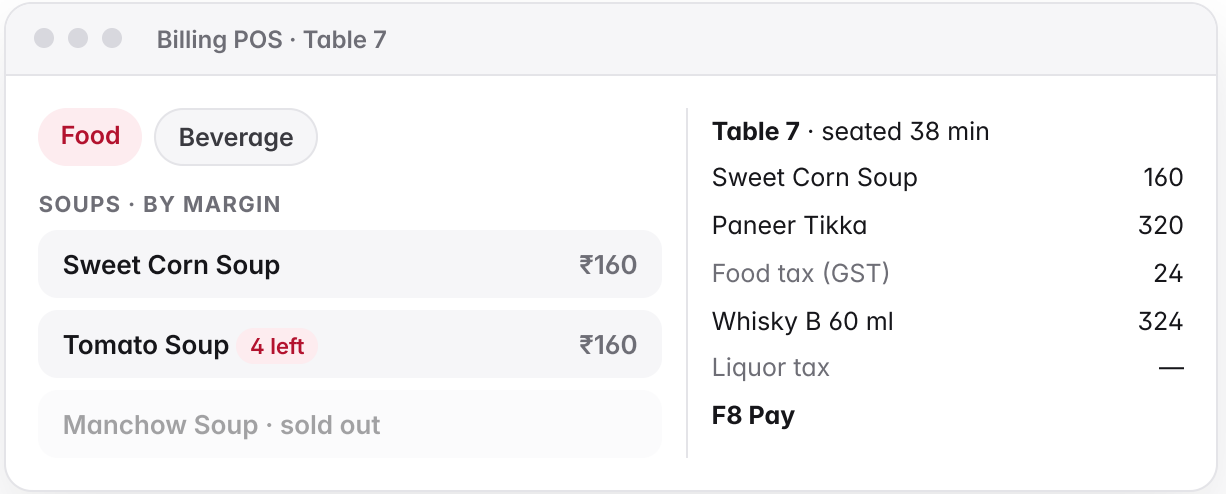

Illustration of the screen. Figures are sample data.

ALWAYS BILLING

No internet? Service carries on

Offline

billing carries on with no connection

Once

each saved bill is sent exactly once, in order

- A clear **OFFLINE** badge and a count of unsent bills
- Bills are saved on the tablet and sent automatically when the connection returns
- Prices and sold-out marks stay as of the last sync
- If something sold offline had actually run out, the stock ledger records the shortfall rather than rejecting the bill

LAST PORTION

Two counters, one Tomato Soup

Stock is locked while it is deducted. If two counters sell the last portion at the same moment, one gets it and the other sees **"Just sold out: Tomato Soup (0 left)"**.

INSTALLABLE

An app on the counter

The POS and the receiving app install to a tablet or phone home screen and open like native apps.

GUEST QR MENU

The menu on the guest's phone, ordering at the table

- **Scan and browse**: food by course in margin order, drinks by type with live offers
- **Veg-only filter**, search and course shortcuts
- **Sold-out items greyed**; the menu refreshes itself every minute
- **Each table has its own QR code**; a table's code also takes orders
- Prices shown before tax, with the outlet's FSSAI number

GUEST

Orders from the table

Cart stays on the phone

→

POS

Staff accept or decline

Declines can carry a reason

PRIVACY BY DESIGN

Nothing collected about guests

No sign-in, no name or phone number, no cookies. An accepted order joins the table's bill with today's prices and the same stock check as a cashier's order.

INVENTORY

A stock ledger that can't be quietly edited

- **Every movement is a line**: receipt, sale, transfer, wastage, spillage, breakage, complimentary, staff meal, count correction
- **Mistakes are reversed, never erased**; both lines stay in the history
- **Three stores per outlet**: main store, kitchen and bar, with transfers between them
- **Weighted average cost**: 10 kg at ₹20 plus 10 kg at ₹50 is valued at ₹35 a kg
- **Earliest expiry used first** for perishables
- **Portions available** per dish from current stock, and sold out the moment any ingredient runs out
- **Stock counts** with variance in quantity and rupees, posted after manager approval
- **Daily liquor register** per label, in bottles and ml, printable

STATUS AT A GLANCE

STATUS	MEANING
Healthy	Above reorder level
Reorder	Purchase suggested
Critical	Below the critical level
Out	Dishes using it are sold out

Liquor is held in ml per label, so part bottles count. A 60 ml peg deducts 60 ml.

PURCHASING AND RECEIVING

From nightly indent to paid vendor, with nothing slipping through

11 PM
Nightly indent
Par – on hand – on order, rounded to the vendor's pack size

→

APPROVE
PDF order
Shared to the vendor on WhatsApp in two taps, or printed

→

5 AM
Gate check
Accept, short or reject each line, with a photo. No prices shown

→

MORNING
Staff re-check
Spoilt or expired items noted with reason and photo

→

SIGN-OFF
Goods received note
Watchman and staff both sign; stock goes in at the billed rate

VENDOR RATES
Every rate kept
Tomato was ₹20 last week and ₹22 today. Rates split into Food and Beverage.

RATE RISE CHECK
Price jumps are held
A billed rate more than 10% above the last one (adjustable) holds the note for review.

RETURNS
Return notes
Items rejected after the driver leaves go on a return note and come off what you owe.

RECIPE COSTING AND MENU RANKING

When tomatoes jump from ₹20 to ₹50 a kg, the menu reacts

- **Recipes entered once** per dish, in grams, ml or pieces, with yield for trimming and cooking loss
- **Re-costed after every delivery** at the new billed rate
- **Margin targets** for the outlet, a course or a single dish
- **Suggested price** when a dish falls under target, applied only after a manager approves
- **In-stock first, then margin %**, ties broken by 30-day sales; managers can pin a dish

WORKED EXAMPLE · SOUPS

DISH	COST	MARGIN	RANK
Tomato Soup, tomato at ₹20	₹38.00	76.25%	1
Sweet Corn Soup	—	73.75%	2
Tomato Soup, tomato at ₹50	₹45.50	71.56%	2

Sweet Corn Soup moves to first place. With a 75% target, Tomato Soup is flagged with a suggested price of ₹182; once approved, it returns to the top.

BEVERAGE OFFERS

Low on one whisky? Move guests to the next best one

- Triggered automatically when a drink falls to a set number of serves
- Similar drinks of the same serve size, priced 1% to 25% above, get a set % off
- A **margin floor** stops any offer that would cut too deep
- Offers end on their own when stock recovers or at day end
- The receipt shows only the price charged
- Liquor offers are switched off by default and turned on per outlet, in line with local excise rules

WORKED EXAMPLE · 60 ML WHISKY

DRINK	MENU	OFFER	WHY
Whisky A	₹320	—	Down to 4 serves: the trigger
Whisky B	₹360	₹324	In band, goes on offer
Whisky C	₹340	₹306	In band, goes on offer
Whisky D		—	Would fall under the 55% margin floor
Premium whisky	₹420	—	Outside the price band

The dashboard compares what each offer sold during the offer with the same length of time before it.

DASHBOARD AND REPORTS

Know what sells, when, and what it earns

Sales and margins

Sales, bills, average bill, food vs beverage; margin by course, drink type and dish, in ₹ and %.

Stock and wastage

Stock value for food and beverage, wastage, low and out items, deliveries awaiting a GRN.

Demand by weekday and hour

A heat grid for everything, a course or one dish. Plus top dishes, top drinks and top liquor brands.

Time at table

Average time from first order to payment, by hour of the day. Food plates and litres of alcohol sold.

MENU ENGINEERING

Star High margin, popular	**Plowhorse** Popular, low margin
Puzzle High margin, slow	**Dog** Neither

Monthly report, plus bar pour cost, day-close totals, stock variance and the liquor register, all exportable to CSV.

Every block follows the same filters (date range, outlet, food or beverage) and updates live as bills are paid.

BUILT FOR GROUPS

Many outlets, many people, every customer's data kept apart

01

Separate database per business

Each restaurant business has its own database and file store, so no query can reach another's data.

02

Seven ready-made roles

Owner, outlet manager, watchman, storekeeper, chef / bar manager, cashier and accounts, editable by ticking permissions.

03

Roles per outlet

Asha can manage Indiranagar without seeing the Mysuru menu. Checked by the server on every request.

04

Quick hand-over

On a shared tablet, tap your name and enter a short PIN. Five wrong tries lock the person out for 15 minutes.

05

Full change history

Who changed what, when, on which device, with before and after values. Bills and payments can't be deleted.

06

Backups and exports

Nightly backups kept 30 days, restore to a date, and every table exportable as CSV.
